

Digital Turnaround Proposal

Your own ordering, shop-floor & growth system — zero commission, every customer yours

Prepared for the Dough Boss ownership team · 17 June 2026 · Confidential · Site backup completed before implementation

Dough Boss already has brand equity, **multiple shops (Bankstown, Revesby, Roselands)**, a proven food offer and a working website. The opportunity is to turn that brochure-style site into **DoughBoss Digital OS** — a practical business system connecting customers, shop staff, payments, marketing and reporting. Orders land **instantly on a screen in each kitchen**, customers pay by card, and you keep **100% of every dollar and 100% of your customers** — versus Uber Eats / Menulog / QR apps that take **7–35% per order** and own the customer. The kitchen order board (Phase 1) is **already in development**.

\$0

per-order commission (vs 7–35% on the apps)

3 shops

Bankstown · Revesby · Roselands
(+ future)

~6–12 mo

typical payback at a modest 100 orders/wk*

**Conservative planning estimate; full assumptions in "The Numbers". Not a guarantee.*

1. Executive summary

Dough Boss's digital system isn't yet strong enough to drive modern ordering, repeat customers, paid ads, local SEO, catering leads, or future multi-shop/franchise scale. This proposal transforms the website into **DoughBoss Digital OS** — not just a visual refresh, but a direct **ordering, shop-operations and marketing platform**. We build it in stages, inside the existing site, without disrupting the live business, proving real online ordering and a live kitchen screen first, then expanding into payments, marketing, multi-shop reporting and growth.

2. Where you are today

The good news: the foundations exist and are paid for. A live audit of the site (17 June 2026) found:

- **43 menu items already on the site** — but they're **not yet wired into the new ordering system**, and the menu has a display bug (the *Flat Bread 11"* category shows empty even though it has items).
- The ordering engine is installed but in a **demo state**: prices in **US dollars**, generic toppings, and the live menu feed empty.
- **No way for the kitchen to see orders in real time**, and **no online card payment** yet.
- **Marketing not measured**: no SEO plugin, and **66 of 66 images missing "alt" text** (hurts Google), no confirmed Facebook/TikTok/Google tracking.
- Catering, wholesale and franchise enquiry forms exist, but leads aren't captured or followed up.

None of this is broken — it's the final setup and wiring, like a fitted-out kitchen that isn't switched on yet.

3. Why this turns the business around

Lever	What it does for the business
Direct ordering	Own the customer and avoid app commissions on every order.
Live kitchen order screens	Each shop sees orders the instant they arrive — fewer missed/wrong orders.
Online payments	Card paid upfront in AUD; faster service, cleaner cash handling.
Local SEO	Show up for “manoush / Lebanese bakery / catering near me” around your suburbs.
Facebook / TikTok remarketing	Advertise to people who already love you — far cheaper than chasing strangers.
Catering & wholesale funnel	Capture and follow up high-value leads (callbacks, quotes) instead of losing them.
Scalable data model	The same system duplicates cleanly to new shops and future franchise locations.

4. How it works

1. A customer picks a shop, browses the menu, and builds their pizza on your website.
2. They check out — paying by card online, or choosing pay-on-pickup.
3. **That shop's kitchen screen lights up with an alarm the instant the order lands.**
4. Staff tap once to **Accept** (and give a time), then **Preparing**, then **Ready**.

5. The customer watches live status on their phone, so they know exactly when to collect.

5. What you get — the full system

What	Today	After
Menu & pizza builder	43 items, not wired in; a display bug	Clean per-shop menu with sizes, toppings, dietary tags, upsells
Cart & checkout	Demo only (USD)	Working basket & checkout in AUD + GST
Kitchen seeing orders	No live view	Live screen with an alarm per shop PHASE 1 — IN DEV
Customer order status	None	Live “Accepted / Preparing / Ready” on their phone
Online card payments	None	Card, Apple Pay & Google Pay in AUD
Text & printed alerts	None	Auto text to the customer; printed kitchen ticket
Multiple shops	Not in ordering	Each shop its own menu, hours, prices & order board
Catering / wholesale leads	Forms, no follow-up	Captured leads with callbacks & quotes tracked
Reporting	None	Daily sales, best sellers, busy times, per shop

6. Online payments — in simple terms

Customers pay by card in Australian dollars, with GST handled correctly so your books stay clean. **Apple Pay and Google Pay** are included. There's **no setup or monthly fee** on the card payments — you pay a small fee per order only when money comes in: **1.7% + 30c** for Australian cards (3.5% + 30c international) — far below app commissions. You can also offer **pay-on-pickup**. Refunds and cancellations are controlled by managers only.

7. Built to grow

The system handles a busy Friday night without breaking a sweat, and adding a shop is straightforward — each location gets its own menu, prices, hours and order board, and orders route to the right kitchen. Later we can add loyalty, gift cards and full multi-shop/franchise reporting.

The best part — **every new shop is commission-free too**. You never start paying a slice per order, no matter how many shops you open.

8. The plan — Stages 0 to 5

Stage	What you get	Roughly how long
0 — Backup & access DONE	Site backed up, access confirmed, safe to build	1–2 days
1 — Stabilise + kitchen board IN DEV	Fix the menu, switch to AUD+GST, live kitchen order board per shop	1–2 weeks
2 — Ordering MVP + payments	Full online ordering (pickup/delivery) + card payments; get found on Google	2–4 weeks
3 — Shop rollout	Tablet + printer per shop; soft-launch one store, then all	1–2 weeks
4 — Marketing launch	Facebook/Instagram & TikTok ads from your own data; catering funnel; reviews	2–4 weeks + ongoing
5 — Scale & franchise readiness	Multi-shop reporting, loyalty, gift cards, delivery rules, franchise admin	Ongoing

Overall Phase 1 (Stages 0–2 core) runs about **3–6 weeks**. We work MVP-first — you start capturing revenue before every advanced feature is built.

9. The numbers — what it costs

Conservative planning estimates (A\$, ex-GST), not guarantees. Stripe pricing to be re-checked before launch.

(a) To build — Phase 1 (the working ordering MVP)

Item	What it is	Indicative (A\$)
Developer build — Phase 1	Stabilise + ordering + payments + staff screens + analytics (≈170–340 hrs). <i>The kitchen order board slice is already built.</i>	\$12,000 – \$35,000 (typical ~\$20,000)
Kitchen tablet	Per shop (one-off)	\$300 – \$900 / shop
Thermal printer (optional)	Per shop (Phase 2)	\$400 – \$1,200 / shop

(b) Monthly running costs once live

Item	Monthly (A\$)
Managed hosting	\$50 – \$300
SMS / email notifications & CRM	\$50 – \$300
SEO plugin	\$0 – \$33 (\$0–\$400/yr)
Card payments (Stripe)	1.7% + 30c per order (no monthly fee)
Advertising media (optional, your dial)	\$500 – \$2,500

10. The numbers — what it saves

Assumes an average order of **A\$32** and a conservative **effective commission avoided of 15–25%** (apps typically take 7–35%). Many direct orders are also new, incremental sales.

Orders/week	Weekly sales	Saved/MONTH @15%	Saved/MONTH @25%
50	\$1,600	\$1,040	\$1,733
100	\$3,200	\$2,080	\$3,467
150	\$4,800	\$3,120	\$5,200

Across three shops, even a modest 100 orders/week keeps roughly \$2,080–\$3,467 every month that would otherwise go to the apps. (Month = 4.33 weeks.)

11. The numbers — payback & first year

Payback on the **typical ~\$20,000 Phase-1 build** (after monthly running costs), by volume:

Orders/week	Payback @15% saved	Payback @25% saved
50	~22 months	~13 months
100	~10 months	~6 months
150	~7 months	~4 months

Typical payback ≈ 6–12 months at a modest 100 orders/week — faster at higher volume. It's a **one-off build**: from Year 2 the kept commission compounds with almost no build cost. And because the kitchen order board is already built, remaining Phase-1 effort is reduced.

Beyond commission: you own the customer list (cheap repeat marketing), make fewer missed/wrong orders, and turn the kitchen faster — value on top of the figures above.

12. Marketing that gets cheaper over time

Because you own your customer list, you advertise straight to people who already love your pizza — a fraction of the cost of chasing strangers. We start with **Facebook & Instagram**, add **TikTok** as you grow, and get you onto **Google** for “pizza/manoush near me”. We also turn the **catering and wholesale enquiries** into a tracked lead funnel (callbacks, quotes) and automatically ask happy customers for **reviews**.

13. The numbers to watch (weekly)

- **Orders per day** per shop — and the trend
- **Average order value** — target $\geq$ A\$32
- **% repeat customers** — your list is the asset
- **Revenue, top items, cancellations** — per shop (manager dashboard)
- **Catering/wholesale leads** captured & converted
- **Ad ROAS** $\geq 3\times$ · **Cost-per-order** vs app commission · **Missed-order count** = 0

14. What we need from you to start

- **Sign-off** to begin Phase 1.
- The **final menu** (items, descriptions, AUD prices, dietary tags) + **photos/brand assets**.
- **Each shop's** address, hours, pickup/delivery + delivery area, and a **staff champion** to train.
- **Stripe + bank + ABN/entity details** for payments & tax invoices.
- Access to **website/hosting** and **Google/Facebook/TikTok** business accounts.
- A **kitchen tablet + wifi** per shop; approval of privacy/policy updates.

15. Risks & how we handle them

Possible worry	How we handle it
Missed order on a busy night	Loud alarm until acknowledged; backup email/SMS to the manager; printed ticket in Stage 3
Wrong menu data / prices / GST	Menu signed off by you; AUD+GST from day one; double-checked in testing
Site breakage during the build	Backup done; we build on a staging copy and keep the live site running
Refund disputes	Card paid upfront; refunds/cancellations manager-controlled and logged

Staff resistance	One simple screen, three taps; we train a champion per shop
Doing too much at once	MVP-first; we ship revenue features before nice-to-haves

16. Next step

Three simple things get us moving: **approve Phase 1** (kitchen board already in development), **hand over the signed-off menu, prices, photos and ABN/bank details**, and **confirm shop details + access**. From there we take your first real online order within days, and have the live kitchen board running in about 1–2 weeks.

The system is already built and waiting. Let's switch it on.

Source & assumptions: based on a connected inspection of the live site on 17 June 2026 and the client's reference proposal. Figures are A\$, ex-GST, ranges only. Stripe pricing to be re-confirmed before launch. Brand confirmed "Dough Boss".
