

DOUGH BOSS.

STAFF & MANAGEMENT QUICK GUIDE

A simple guide to customer confirmations, order tracking, the Revesby kitchen board and the controls management uses every day.

Revesby online-ordering rollout – verify in WordPress

Bankstown baking – visit or call

Roselands baking – visit or call

Tyro activation pending

THE DECISION

USE EMAIL AND TRACKING TOGETHER.

Recommended: send an immediate confirmation email with the order number, then—when milestone notifications are enabled—send only two meaningful updates: accepted with ETA and ready. Keep a Track My Order page available using order number plus matching email.

1

IMMEDIATE

Confirmation email as soon as the durable order is created. It lists the order number, items, total and tracking instructions.

2

USEFUL UPDATES

When enabled: accepted with the kitchen ETA, then ready for pickup/table/delivery. Avoid emailing every small internal kitchen step.

3

SELF-SERVICE

The customer can check status at any time with their order number and the exact email used at checkout.

Important: WordPress saying an email was handed to its mail system does not prove inbox delivery. Before launch, configure authenticated transactional email and verify SPF, DKIM and DMARC for the sending domain.

ONE SOURCE OF TRUTH

CUSTOMER TO KITCHEN, END TO END.

Customer orders
Revesby pickup

**WordPress validates
cart + payment**

**Durable order
+ confirmation**

**Kitchen accepts
and chooses ETA**

**Preparing
then Ready**

**Customer tracker
and email update**

The kitchen status is the customer status. Staff should update the board when the real work changes—not early, and not after the fact.

CUSTOMER EXPERIENCE

WHAT CUSTOMERS RECEIVE.

Moment	Customer sees	Who triggers it
AUTOMATIC Order received	Order number, items, total and tracking instructions.	The checkout creates the durable order.
STAFF ACTION Accepted	When enabled, confirmation that the kitchen has started, plus ETA when selected.	Kitchen taps Accept and selects the ETA.
STAFF ACTION Ready	When enabled, pickup, table-service or delivery handoff wording.	Kitchen moves the order to Ready.
ANY TIME Track My Order	Received, preparing, ready and completed stages, timing and total.	Customer enters order number plus matching email.

1× Large Pepperoni	\$21.90
1× Garlic Bread	\$7.90
1× Coke 1.25L	\$4.50
PAID	\$36.30

Ready for pickup in ~25 min

TRACK · DB-260617-87T2

- Order received**
6:18pm
- Accepted by kitchen**
6:23pm · ETA 20 min
- In the oven — ready in ~15pm**
We'll text you when it's ready
- Ready for pickup**

Dough Boss Bankstown · 0466 xxxx xxxx

The customer sees their order move through each stage — the same status the kitchen sets on the iPad.

- **One source of truth** — kitchen taps a stage, the customer sees it.
- **Fewer phone calls** — no “is my order ready yet?”
- **SMS add-on** — optional “ready” / “on its way” texts.
- **Receipt & details saved** to your customer list.

Representation of the finished product · sample data

06

1. The order number identifies the order.

2. Accepted and ETA come directly from the kitchen.

3. Ready changes only when staff mark the order ready.

Illustration uses sample data and an older multi-shop concept. Current online ordering rollout is Revesby only.

MANAGEMENT SETUP: TRACK MY ORDER PAGE

1

In WordPress, choose **Pages** → **Add New**.

2

Name the page **Track My Order**.

3

Add a Shortcode block containing `[doughboss_order_tracking]`.

4

Publish the page and copy its complete URL.

5

Open **DoughBoss** → **Settings** → **Store**. Paste the URL into **Track My Order page**, then save.

6

Place a no-payment test order. Confirm the email link prefills only the order number and still asks for the matching email.

FIVE ACTIONS DURING SERVICE.

1

Sign in with your own kitchen account and open **DoughBoss** → **Order Board**. Confirm the connection indicator is healthy and sound is on.

2

Read the complete order. Check pickup/table/delivery, customer notes, modifiers and quantities before accepting.

3

Accept and choose a real ETA. This immediately updates the tracker and, when enabled, sends the accepted email.

4

Move the card with the food. Preparing/Baking means it is genuinely being made. Ready means it is genuinely ready to hand over.

5

Complete only at handoff. Mark collected/served/delivered after the customer receives it.

1. Accept the new order and select the ETA.

2. Work from the New, Preparing and Ready lanes.

3. Ready is customer-facing—do not tap it early.

Illustration uses sample data. The production Revesby board uses the same lifecycle and protected WordPress staff access.

IF TWO TABLETS DISAGREE

The older action is rejected instead of overwriting the newer state. Refresh the board, read the current status, then act once.

DO NOT EDIT THE ORDER IN KDS

The kitchen board is for status and timing. Confirm material item changes with management and preserve the audit trail.

IF THE BOARD SAYS OFFLINE

Stop changing cards from stale data. Use Retry once, then open DoughBoss → Orders to reconcile. Log the order number, time, contact, total and payment status. Never recreate or recharge a paid order.

CANCELLATION OR REFUND

A manager decides. Cancel the order state only after checking production progress; refund only with payment-provider evidence, then record the reason and confirm the final customer status.

OWNER AND MANAGEMENT

DAILY CONTROLS THAT MATTER.

OPENING

- Confirm Revesby is the only online-order location.
- Check menu prices and sold-out items.
- Open the kitchen board and test sound.
- Confirm ordering and the selected payment provider are intentionally on or off.

DURING SERVICE

- Watch aging orders and delayed ETAs.
- Review cancellations/refunds.
- Check ambiguous POSPal items before any retry.
- Keep Bankstown and Roselands visit-or-call only for this rollout.

CUSTOMER MESSAGES

- Settings → Real-time & Notifications: deliberately choose accepted and ready email toggles.
- Message Templates: confirmation, accepted and ready wording.
- Send a real test to Gmail and Outlook before launch.

CLOSING

- Clear or explain every active order.
- Reconcile paid orders, cancellations and refunds.
- Review POSPal outbox exceptions.
- Record any issue before staff sign out.

1. Use totals for reconciliation—not as a replacement for payment-provider records.

2. Multi-shop reporting remains staged while Revesby alone orders online.

3. Owners control menus, hours, ordering and notifications.

Illustration contains sample figures, not live sales. Current online-order data should originate from Revesby only.

QUICK FIXES

WHAT TO DO WHEN SOMETHING LOOKS WRONG.

Problem	Do this first	Do not do
Customer says no confirmation email	Confirm the exact checkout email, check spam, then check the WordPress mail log/provider delivery event using the order number.	Do not ask them to place and pay again until the original order is checked.
Tracking says no matching order	Use the exact order number and exact email used at checkout. Check for spelling or a different family email.	Do not reveal whether another customer's order number exists.
Order is missing from KDS or board says Offline	Do not change stale cards. Retry once, then check DoughBoss → Orders and the Revesby filter. Log the order number, time, contact, total and payment status.	Do not recreate or recharge a paid order.
POSPal is offline or ambiguous	Keep producing from the DoughBoss order. Review the POSPal outbox and verify the till before a manual release.	Never repeatedly resend an ambiguous order.
Customer ordered after hours	Treat it as an unpaid Revesby preorder request. Call and confirm timing before promoting it.	Do not promise acceptance or payment until staff confirms it.
Wrong status was tapped	Use the available undo/recall immediately or ask a manager to correct the lifecycle.	Do not leave a customer-facing Ready state if the food is not ready.

ACCEPTANCE CHECKLIST

BEFORE THE FIRST LIVE REVESBY ORDER.

CUSTOMER

- ☐ Track My Order page is published and configured.
- ☐ Revesby location, pickup mode and `ordering_open` are deliberately verified.
- ☐ Confirmation email arrives with correct items and total.
- ☐ Accepted/ready notification toggles are deliberately on or off.
- ☐ When enabled, accepted email shows the chosen ETA.
- ☐ When enabled, ready email has the correct pickup wording.
- ☐ Wrong email cannot open the order.
- ☐ Mobile tracking page is readable.

STAFF AND MANAGEMENT

- ☐ Kitchen users have restricted KDS accounts.
- ☐ New-order sound works on the Revesby tablet.
- ☐ Two-tablet stale update is safely rejected.
- ☐ Cancellation and refund procedure is understood.
- ☐ Gateway/payment mode is deliberately verified before ordering opens.
- ☐ Tyro sandbox and webhook checks pass before live keys.
- ☐ POSPal offline test leaves the order on KDS.

Current rollout: Revesby is the only location intended for online ordering. Before telling staff or customers that it is live, management must verify the installed WordPress release, `ordering_open`, location, hours, payment mode, notification toggles and real mail delivery.

Bankstown and Roselands remain visit-or-call until their own acceptance checks are completed.
