

DOUGH BOSS.

STAFF CLOCK

Setup, badge printing, daily use and manager guide

TODAY'S OPERATING MODEL

Personal QR badge + private PIN + exact shop assignment. The kiosk clears the badge session after every action.

For managers, staff and the person setting up the kiosk and printer.

Staff clock: doughboss.com.au/staff-clock/

01 - UNDERSTAND THE CLOCK

WHAT IT RECORDS

The system records attendance evidence for one staff identity at one real shop. It does not make payroll policy decisions.

CURRENT SCOPE

The live attendance shop currently configured in DoughBoss is Revesby. Never assign a worker to Revesby merely to enable their badge if they actually work elsewhere.

RECORDED	NOT RECORDED OR DECIDED
Employee account and assigned shop	GPS, browser location or continuous tracking in attendance tables
Clock-in and clock-out timestamps	Automatic or assumed meal breaks
Breaks actually started and ended	Whether a break is paid
Worked minutes after recorded breaks	Overtime or final payroll approval
Roster start and grace snapshot	A replacement for management review

SECURITY RULES

[]	One individual staff account per employee - never a shared identity.
[]	One current personal badge per employee; reissuing revokes the earlier badge.
[]	New badges use a 6-8 digit PIN. The PIN is private and is never printed on the badge.
[]	Five incorrect PIN attempts lock that badge for 15 minutes.
[]	The badge session clears after each clock or break action.

02 - MANAGER SETUP

SET UP EACH EMPLOYEE

Complete these steps before issuing a badge. A badge must not be used to work around a missing or incorrect shop assignment.

1

Create the account

In WordPress, open **Users** and create or edit the employee's individual account.

2

Choose the role

Select **DoughBoss Staff**. Use Kitchen or Manager only when that person genuinely needs the extra permissions.

3

Assign the real shop

Under **DoughBoss staff assignment**, choose the employee's exact active shop.

4

Set the roster

Enter start times and grace minutes only for days the person is rostered. Leave other days blank.

5

Open badge management

Go to **DoughBoss > Staff QR badges** and select the employee.

6

Choose a private PIN

Enter a personal 6-8 digit PIN. Do not reuse a team PIN or write it on the badge.

7

Create once

Select **Create secure QR badge**. The QR bearer link appears only on the issue page.

8

Print and separate

Print or save the badge immediately. Give the card and PIN privately and separately.

LOST OR COMPROMISED BADGE

Revoke it in **Staff QR badges**. Reissue only after confirming the employee. The previous badge becomes invalid immediately.

03 - PRINTER AND SCANNER

PRINT A BADGE THAT SCANS

Use the one-time badge page's Print / save as PDF button. Never leave the page until the card has been printed or saved and tested.

1

Select the printer

Choose the office, label or card printer. Use portrait orientation.

2

Keep full scale

Use 100 percent scale where possible. Keep the QR square, complete and uncropped.

3

Use high contrast

Print black on white at high quality. Avoid dark, patterned or glossy stock.

4

Keep the PIN separate

The PIN does not belong on the badge or in the QR printout.

5

Protect without glare

Trim only outside the QR area. If laminating or using a holder, check that reflections do not block scanning.

6

Test the final card

Scan the actual printed card at the real kiosk before giving it to the employee.

USB 2D SCANNER SETUP

1. Plug the scanner into the kiosk PC.
2. Configure keyboard or HID mode.
3. Enable an Enter suffix after each scan.
4. Open the Staff Clock scan field and test the printed card.
5. If it does not advance automatically, press Enter manually and correct the scanner configuration before launch.

PRINTER CHOICE

A normal A4 laser or inkjet printer is acceptable. A label or card printer is optional. Scan reliability matters more than printer type.

ONE PERSON. ONE BADGE. ONE ACTION.

Use a dedicated browser profile for the clock. Keep manager and kitchen sessions in separate profiles.

KIOSK SETUP

[]	Create a Chrome or Edge profile named DoughBoss Staff Clock.
[]	Open doughboss.com.au/staff-clock/ and use full-screen mode.
[]	Do not save WordPress or manager passwords in the kiosk profile.
[]	Use Ethernet where practical and keep the device powered during trade.
[]	For touch, connect both the display cable and the monitor's USB data cable.
[]	Use 1920 x 1080 at 100 percent scale where supported.

EVERY SHIFT

1

Scan

Scan your own personal QR badge.

2

Verify

Enter your private PIN on the large number pad.

3

Act

Select the single action shown: Clock in, Start break, End break or Clock out.

4

Confirm

Wait for the success message. Do not walk away before confirmation.

5

Clear

The session clears. The next employee must scan their own badge.

DO NOT SHARE

Never clock for another person, borrow a badge, share a PIN or use a real employee's badge for training.

TIMESHEETS, CORRECTIONS AND PAYROLL

Open DoughBoss > Staff Timesheet. Active shifts appear first. Filter by period or shop, then export CSV for review.

A TIMESHEET IS EVIDENCE, NOT FINAL PAYROLL

Worked time subtracts only recorded breaks. Management still owns break policy, overtime, exceptions and payroll approval.

1

Review active shifts

Check for anyone still clocked in and investigate before payroll is prepared.

2

Check the shop

Confirm the recorded shop matches where the employee actually worked.

3

Check breaks

Only actual start/end break events reduce worked minutes.

4

Correct with evidence

If a shift is wrong, confirm the correct information. Never guess a time.

5

Give a clear reason

Every manager correction needs a meaningful reason and remains in the audit trail.

6

Export and approve

Export CSV, review exceptions, and keep final payroll approval with an authorised manager.

SUGGESTED CORRECTION REASONS

GOOD

Employee confirmed they forgot to clock out after the 2:30 pm close; manager verified against the closing roster.

POOR

Fixing it

TROUBLESHOOTING

Do not work around a clock problem by sharing accounts, issuing duplicate badges or assigning the wrong shop.

1**Nothing after scanning**

Click the scan field, scan again, then press Enter. Confirm the scanner sends an Enter suffix.

2**Badge not accepted**

Use the employee's current badge. An old badge stops working as soon as a replacement is issued.

3**PIN locked**

Wait 15 minutes. If compromise is possible, a manager verifies the employee and reissues the badge.

4**No active shop**

A manager must assign the person's real active shop. Do not select Revesby as a workaround.

5**Wrong action or break**

Stop and tell a manager. Preserve the evidence and use the approved correction process.

6**Kiosk offline**

Use the approved outage record, note the real time, and reconcile later with a manager reason.

7**Printed QR will not scan**

Reprint black on white, high quality, full and uncropped. Remove glare and test again.

8**Touch does not work**

Confirm the monitor's USB data/upstream cable is connected in addition to the display cable.

WHEN TO STOP

If the identity, shop, time or action is uncertain, stop and ask a manager. Accurate attendance is more important than forcing the screen forward.

07 - LAUNCH ACCEPTANCE

PROVE THE COMPLETE FLOW

Complete this checklist on the real kiosk, scanner and printer before staff rely on the system.

☐	Every enabled employee has one individual staff account.
☐	Every enabled employee is assigned to their real active shop.
☐	Roster start and grace rules are approved.
☐	Paid/unpaid break rules are approved and communicated.
☐	Each badge is printed once and each PIN is delivered separately.
☐	Lost and superseded badges are revoked.
☐	A controlled badge scans successfully from the final printed card.
☐	The controlled user enters the PIN and clocks in at the correct shop.
☐	The same user starts and ends a break, then clocks out.
☐	The shift, break and worked time appear correctly in Staff Timesheet.
☐	The CSV export contains the same shift and neutralises unsafe spreadsheet cells.
☐	The scanner, touch screen, network and dedicated browser profile work together.
☐	Staff know the outage and correction contact process.

MANAGER		DATE	
TEST STAFF		KIOSK	
RESULT	☐ PASS ☐ NEEDS ACTION	RETEST	

READY MEANS PHYSICALLY TESTED

Code tests and a visible web page are necessary, but the clock is operational only after the final printed badge, scanner, kiosk, shift actions and timesheet have passed together.
