

Own Your Orders

Your own online ordering system — zero commission, every customer yours

Prepared for the Owner · 17 June 2026 · Confidential business proposal

Your website already has a complete online-ordering system installed — it has simply never been switched on. This plan turns it into **your own branded ordering system**: orders appear **instantly on a screen in your kitchen**, customers pay by card, and you keep **100% of every dollar and 100% of your customers**. Unlike Uber Eats, Menulog and the QR apps that take **7–35% of every order** and own your customers, this charges **zero per-order commission**. Phase 1 — the live kitchen order board — is **already in development** and ready in about **1–2 weeks**.

\$0

per-order commission (vs 7–35% on the apps)

~1.8 mo

estimated payback on the Phase 1 build*

~\$2k–3.5k

est. kept per month at 100 orders/wk*

**Conservative planning estimates, explained with full assumptions in “The Numbers” section. Not a guarantee.*

1. The big idea — own your orders

Right now, the big delivery apps take a large slice of every sale, and they keep your customers as *their* customers. With your own ordering system, that changes completely. You pay **zero commission** on every order — the money from a A\$30 pizza stays with you, not split with Uber Eats or Menulog. Just as importantly, the customers stay **yours**: their names, phone numbers and favourite orders. That means you can bring them back again and again, on your terms, without paying a middleman every time.

2. Where you are today

Here's the good news: the ordering system is **already built and sitting on your website**. The not-yet-done part is simply that it was never switched on. Today there are no menu items entered, the order pages aren't published, and the prices are set in US dollars with no GST. There's also no live way for the kitchen to see orders, and no online card payment yet. None of this is a problem — it's the final setup, like a new oven that's installed but not yet plugged in.

3. How it works

1. A customer opens your website, browses the menu, and builds their pizza.
2. They check out — paying by card online, or choosing pay-on-pickup.
3. **The kitchen screen lights up with an alarm the instant the order lands.** Nobody has to watch a phone.
4. Staff tap once to **Accept** (and give a time), then **Preparing**, then **Ready** — three taps.
5. The customer watches the live status on their phone, so they know exactly when to collect.

4. What you get — the full system

What	Today	After
Menu & pizza builder	Empty, nothing listed	Full menu with sizes, toppings and build-your-own pizza
Cart & checkout	Not published	Simple, working basket and checkout
Kitchen seeing orders	No live view	Live screen with an alarm the moment an order arrives PHASE 1
Customer order status	None	Live “Accepted / Preparing / Ready” on their phone
Online card payments	None	Card, Apple Pay & Google Pay in Australian dollars
Text & printed alerts	None	Auto text to the customer; ticket prints in the kitchen
Multiple shops	One only	Each shop with its own menu, hours and order board
Reporting	None	Clear sales numbers: busiest times, best sellers

5. Online payments — in simple terms

Customers pay by card in Australian dollars, with GST handled correctly so your books stay clean.

Apple Pay and Google Pay are included, so people pay in a couple of taps. There's **no monthly lock-in** for card payments — you pay a small fee per order, only when money actually comes in (about **1.7% + 30c** an order, far below app commissions). Prefer cash at the counter? You can also offer **pay-on-pickup**.

6. Built to grow

The system handles a busy Friday night without breaking a sweat — whether ten orders or a hundred land in an hour, each one lights up the kitchen screen in turn, in the order it arrived. Adding a second or third shop later is straightforward: each new location gets its own menu, hours and order board.

And here's the best part — **every new shop is commission-free too**. You never start paying a slice per order, no matter how many shops you open.

7. The plan — Stages 0 to 4

Stage	What you get	Roughly how long
0 — Go live	Real menu loaded, prices in AUD + GST, order pages switched on → first real order	1–2 days
1 — Kitchen order board IN DEV	Live screen with instant alerts and one-tap status; customers see live status	About 1–2 weeks
2 — Payments + get found	Online card payments + showing up on Google for “pizza near me”	2–3 weeks
3 — Alerts + ads	Printed & text alerts; Facebook/Instagram ads from your own customer list	~1 week + ongoing
4 — Scale	Multiple shops + reporting + TikTok	3–4 weeks

8. The numbers — what it costs

Every figure below is a conservative planning estimate, not a guarantee. Actual results depend on order volumes, pricing and promotion. All amounts in A\$.

(a) To start — Phase 1 (the live kitchen order board)

Item	What it is	Indicative cost (A\$)
Developer build effort	Custom dev work, Phase 1 (order board + checkout, runs inside your site, no paid realtime service)	\$2,500 – \$5,000 (typical ~\$3,500)
Managed hosting	Keeps the site fast and reliable	\$20 – \$50 / mo
Backups	Protects the site and order data	\$0 – \$15 / mo

Full custom build, all stages (one-off, for reference): **low ~\$6,000 · typical ~\$10,000 · high ~\$18,000**. Phase 1 alone is the \$2,500–\$5,000 slice above. Estimates for a small custom dev project, not fixed quotes.

(b) Monthly running cost once live

Stage	Tools running	Monthly (A\$)
Phase 1 (live MVP)	Hosting + backups + Stripe (per-order only, no monthly fee)	\$20 – \$65
Phase 2 (push + auto-print)	+ Realtime push, auto-print, SMS	\$40 – \$180
Phase 3 (automation)	+ Zapier automation	\$70 – \$255

Stripe is ~1.7% + \$0.30 per order — a processing cost, not a commission, and far below app fees. SMS ~\$0.05–0.08 each.

9. The numbers — what it saves

Assumes an average order of **A\$32** and a conservative **effective commission avoided of 15–25%** (apps typically take 7–35%). Many direct orders are also new, incremental sales.

Orders/ week	Weekly sales	Saved/wk @15%	Saved/wk @25%	Saved/MONTH @15%	Saved/MONTH @25%
50	\$1,600	\$240	\$400	\$1,040	\$1,733
100	\$3,200	\$480	\$800	\$2,080	\$3,467
150	\$4,800	\$720	\$1,200	\$3,120	\$5,200

At a modest 100 orders/week, you keep roughly \$2,080–\$3,467 every month that would otherwise be handed to the apps. (Month = 4.33 weeks.)

10. The numbers — payback & the first year

Break-even

Using the **mid scenario (100 orders/week)** and conservative figures:

- Monthly commission saved (mid, @15%): **\$2,080**
- Monthly running cost (Phase 1–2, mid): **~\$110**
- **Net monthly benefit:** $\$2,080 - \$110 = \text{~}\$1,970$
- One-off Phase 1 build to recover (typical): **~\$3,500**

Payback $\approx$ 1.8 months ($\$3,500 \div \$1,970$). Even on the slowest assumptions (50 orders/wk $\rightarrow$ ~\$930/mo net), Phase 1 pays for itself in **under 4 months**.

The 12-month picture (mid scenario, conservative — uses the lower 15% column + a modest \$700/mo Meta-only ad budget)

Line item	12-month total (A\$)
Commission kept	+\$24,960
Build (one-off, typical)	–\$3,500
Tools / hosting (~\$110/mo)	–\$1,320
Advertising (~\$700/mo, optional)	–\$8,400
Estimated net benefit (Year 1)	$\approx$ +\$11,740

Year 2 onward drops the one-off build, so net benefit rises further. Ad spend is optional and scaled to results.

11. Extra upside (beyond commission)

You own 100% of the customer list — apps never hand that over. Conservative, illustrative examples:

- **Repeat orders:** a 5% lift in repeat purchases on a \$3,200/week base $\approx$ **+\$690/month**, won via cheap text/email instead of paid app placement.
- **Fewer missed/wrong orders:** digital tickets cut errors — even 2 saved orders/week at \$32 $\approx$ **\$280/month** in food & refunds avoided.
- **Faster kitchen flow:** the live board sequences orders, freeing staff during the rush.

12. Marketing that gets cheaper over time

Because you own your customer list, you can advertise straight to people who already love your pizza — a fraction of the cost of chasing strangers. We start with **Facebook and Instagram**, where your local fans already are, then move into **TikTok** as you grow. We'll also help you show up on **Google** when people search “pizza near me,” so new customers find you for free. Over time, your own audience does more of the work and your cost to win an order keeps dropping.

13. The numbers to watch (weekly)

- **Orders per day** — and the weekly trend
- **Average order value** — target $\geq$ A\$32
- **% repeat customers** — your list is the asset; watch it grow
- **Cost-per-order** on your own system vs app commission ($\sim 84c + 1.7\%$ vs 15–25%)
- **Ad ROAS** — revenue per \$1 of ad spend (aim $\geq 3\times$)
- **Missed-order count** — target: 0

14. What we need from you to start

- Your **sign-off** to begin Phase 1.
- Confirm the brand: is it **Dough Boss**, or is **Bite Pizzas** a rebrand, a second brand, or our project nickname?
- The **real menu** with prices, plus good **photos** of the pizzas.
- **Shop address(es), hours, pickup and/or delivery** (and your delivery area), and your **ABN**.
- A **tablet for the kitchen**, working wifi, and one staff member we can train.
- Your **website/hosting login** — and a **backup** of the site, just to be safe.

15. Risks & how we handle them

Possible worry	How we handle it
Staff find the screen confusing	One simple screen, three taps; we train your team
Busy night, missed order	Loud alarm on every order; nothing gets buried (text + printed ticket backup added in Stage 3)
Website goes down	We take a backup first and test before switching on
Wrong prices or GST	Set up in AUD with GST from day one and double-checked
Customer doesn't pay	Card paid upfront, or pay-on-pickup at the counter
Costs creep as we scale	Costs are staged and optional — you approve each step

16. Next step

Three simple things get us moving:

1. **Approve Phase 1** (the kitchen order board — already in development).
2. **Confirm the brand** (Dough Boss vs Bite Pizzas).
3. **Hand over the menu, prices, photos and website access.**

From there, we take your first real online order within days, and have the live kitchen board running in about 1–2 weeks — the day Dough Boss stops paying commissions and starts owning its customers.

The system is already built and waiting. Let's switch it on.
